Latest Technical Support

uPerform Recordings:

Customers have used uPerform to record against over 100 “known target applications”) KTAs.

Server Enhancements:

ANCILE uPerform continues to make proactive security enhancements to ensure that your content is safe.

Browser Support:

Published content has been tested on the latest versions of Internet Explorer 11, Google Chrome, Edge, and Mozilla Fox.

Supported Environments:

uPerform has been updated to work with the latest versions of Oracle, DB2, and SQL databases. In addition, Windows Server 2016 and Office 2016 are now supported.

Spotlight on 5.4 Enhancements

Video Output

- Single-file video outputs using same source content as uPerform simulations.
- Produces either MP4 or WMV format output.
- Provides a new option for mobile consumption of content.
- Single-file format is easily deployed for more flexible distribution to end users.

Procedure Table Output

- Condensed output type (HTML and PDF formats) designed for print or consumption on a mobile platform.
- 3-column layout format: Step number, Action Text, and Cropped screenshot.
- Ideal job support for employees on the go (e.g., shop or retail floors).

Improved End-User Website Skins

- Minimizes distractions by hiding empty folders, areas, and help content sections.
- Better content representation through additional object type icons.
- Content description display option for optimal screening of search results.
- Content sorting by type to enable user to easily find their preferred content format.
- Responsive website skins for delivery on mobile devices.

Enhanced uPerform In-App CSH

- Provides access to help content for any web application.
- Convenient help button is immediately available, yet unobtrusive.
- Help delivered in a resizable dialog directly within application being used.
- Search capability is included to access the full range of content on the uPerform server.
